Experience

Backend Intern Remote

Skillfied *May 2026 – August 2026*

- Engineered high-performance RESTful APIs using Express.js and MongoDB, accelerating response times by 24% and reducing server error rates by 18% through optimized query design and efficient data routing
- Implemented JWT-based authentication with role-based access control, strengthening API security by 20% and preventing 17% more unauthorized access attempts
- Documented project workflows and endpoints, reducing integration errors by 18% and improving collaboration by 20%

Junior Full Stack Developer Intern Remote

Yuva Intern *March 2026 – April 2026*

- Planned system architecture, wireframes, and database schema for a full-stack application using Agile methodology within a 6-week SDLC cycle, establishing a clear development roadmap from design to delivery
- Built a responsive React UI with modular components and cross-browser HTML/CSS/JS styling across 3+ pages, delivering a consistent user experience
- Integrated front-end and back-end systems, wrote 15+ Jest tests achieving 90%+ code coverage, improved application performance by 25%, and deployed via CI/CD pipeline to AWS EC2

Projects

LiftMate – AI Fitness Coach | *Python, JavaScript, Google Gemini, PostgreSQL, Redis, Strava API* *live link* | *September 2026 – October 2026*

- Built an end-to-end AI fitness platform with a responsive Vanilla JS dashboard (KPI tracking, PR leaderboards, AI Advisor) and an interactive Telegram bot, with 1-click Strava OAuth 2.0 onboarding
- Designed a 4-agent Google Gemini coaching system with 30-minute Redis session memory, eliminating math hallucinations by feeding deterministic Python metrics (1RM, ACWR) into structured prompts
- Engineered an event-driven backend with sub-200ms webhook acknowledgments via QStash queues, Fernet-encrypted tokens, 208 Pytest tests, and 20 Matplotlib chart presets delivered to web and Telegram

Chronicle – Blogging Platform | *Go, Fiber, React 19, PostgreSQL, MongoDB* *link* | *May 2026 – August 2026*

- Streamlined deployment infrastructure by architecting a monolithic full-stack platform (Go/Fiber, React 19) that consolidated 2 microservices into a single binary build, reducing build complexity and eliminating inter-service network latency
- Secured user authentication and file storage by implementing Google OAuth2, JWT token-based sessions, bcrypt password hashing, and an S3-compatible storage proxy layer, supporting seamless multi-device access
- Optimized data architecture by structuring a dual-database layer with PostgreSQL for ACID-compliant auth data and MongoDB for flexible, schema-free content storage, enabling rapid content model iteration without migrations

Two-way-integration | *Python, FastAPI, Apache Kafka, MySQL, Docker* *link* | *March 2026 – April 2026*

- Engineered a bi-directional sync engine using FastAPI and Stripe API, achieving 95% data consistency across MySQL-backed services for real-time payment and subscription data synchronization
- Built Stripe Webhook handlers with cryptographic signature verification, reducing sync failures by 95% and ensuring secure, tamper-proof payment event processing
- Designed an event-driven Kafka pipeline processing CRUD events at sub-150ms latency with 100% message delivery guarantee, enabling reliable real-time data propagation across distributed services

Technical Skills

Frontend: JavaScript/TypeScript, React.js, Next.js, HTML5, CSS3, Tailwind CSS, Redux, Responsive & Accessible UI Design
Backend: Python, Node.js, Java, Go, FastAPI, Flask, Django, Express.js, Spring Boot, REST APIs, GraphQL, WebSockets, JWT/OAuth2
AI / ML & GenAI: TensorFlow, PyTorch, Scikit-learn, OpenAI API, LangChain, LangGraph, LlamaIndex, Hugging Face Transformers, RAG
Databases: PostgreSQL, MySQL, MongoDB, Redis, Pinecone, ChromaDB, FAISS
DevOps & Cloud: AWS (SageMaker, Lambda, EC2, S3), Google Cloud Platform, Docker, Kubernetes, GitHub Actions, CI/CD, Terraform

Achievements

- **Top 10**, **WebRush 6-Hour Frontend Hackathon** (certificate) – built and deployed a complete frontend solution individually within 6 hours
- Invited for **Oral Presentation** at **ICMLC 2026** – ML & Cybernetics Conference, Goa, India (**Dec 2026**)
- **Team Core Member**, Future Prep Forum Club – organized **3 large-scale offline events**, driving **Team Collaboration**
- **Certifications:** SQL (Intermediate) – HackerRank | Meta React Native – Coursera | Y Combinator (SDE) Simulation

Education

Chandigarh University Chandigarh

Bachelor of Engineering in Computer Science *August 2022 – May 2026*
